DETAILED ACTION

Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

See reasons of record in the Office action of 6 October 2004. It seems as if Applicant did not understand the examiner's question (or the examiner doesn't understand Applicant's response). The claim language is confusing. The question is what is meant by "template." Template can mean that a shape is replicated, such as when a dress pattern is used as a template for cutting out the shapes of the cloth. So the claim term here could mean that the overlying layer has the same shape and size as the "template." This is common when layers are fabricated one on the other. But "template" could also refer to epitaxial crystal growth, where the lattice spacing (between two atoms, for example) is replicated in the overlying layer. This interpretation would have nothing to do with the macroscopic shape and size of the layer on the template, but would refer to the microstructure of the crystal lattice. Applicant appears to respond that both interpretations are intended. But surely not, because that would (unnecessarily) limit the scope of the claim. (?) The claim must mean one thing or the other. Also, Applicant's response states that the term encompasses "more than" a duplicated crystal structure, and "more than" having substantially similar structure. More than? This introduces an additional source of indefiniteness. How would one know what is meant by this additional "more than"? What does the term "template" mean in these claims? Examiner really needs to know what the claims encompass.
